WORK EXPERIENCE

SAP UI5 FIORI DEVELOPER

2024

VKOLLAB TECHNOLOGIES PVT

- Responsible for enhancement and addition of new features to existing Custom Fiori Applications.
- Good experience with Fiori app design, UI implementation and using OData,JSON models in application development.
- Developed custom UI5 applications with mobile responsiveness.
- Developed Custom Controls to provide functionality and look and feel which is not provided by standard controls in SAP library.
- Developed utilities for form validation & confirmation dialogs. Built theme for the project using UI Theme designer.
- Developed ticketing desk tool application using React and NODEJS technologies.
- Experience with GIT repository and commands to enable parallel development and version management in big size project team.
- Developed Full stack applications using CAPM technology in SAP BTP.

WORK EXPERIENCE

VKT TICKETING TOOL

2024

- Built a web-based internal ticketing system to streamline IT support and incident management for VKOLLAB Technology.
- Designed responsive UI screens using React.js, HTML, CSS, and implemented reusable components for better scalability.
- Developed backend APIs using Node.js & Express for ticket creation, assignment, user authentication, and status tracking.
- Integrated database to store users, tickets, and activity logs, ensuring secure and efficient data management.
- Implemented role-based access (Admin & Employee) and automated notification workflows for faster ticket resolution.
- Enabled real-time ticket updates, analytics dashboard, and filter-based search for efficient task handling.
- Version-controlled source code using Git & GitHub, and followed modular development practices.

SAP CAPM

Full-Stack Developer (SAP CAPM | BTP | Cloud Foundry |
SAP HANA | Fiori/UI5)

2025

- Developed a side-by-side extension application using SAP CAPM to enhance and extend S/4HANA business processes.
- Designed and implemented CAP services, entities, and database models with SAP HANA as the persistence layer.
- Built intuitive UI screens using SAPUI5/Fiori elements for seamless user experience and real-time data access.
- Integrated OData services with backend CAP models to fetch, create, and update transactional records securely.
- Deployed and managed the application on SAP BTP Cloud Foundry, including multi-target application (MTA) deployment.
